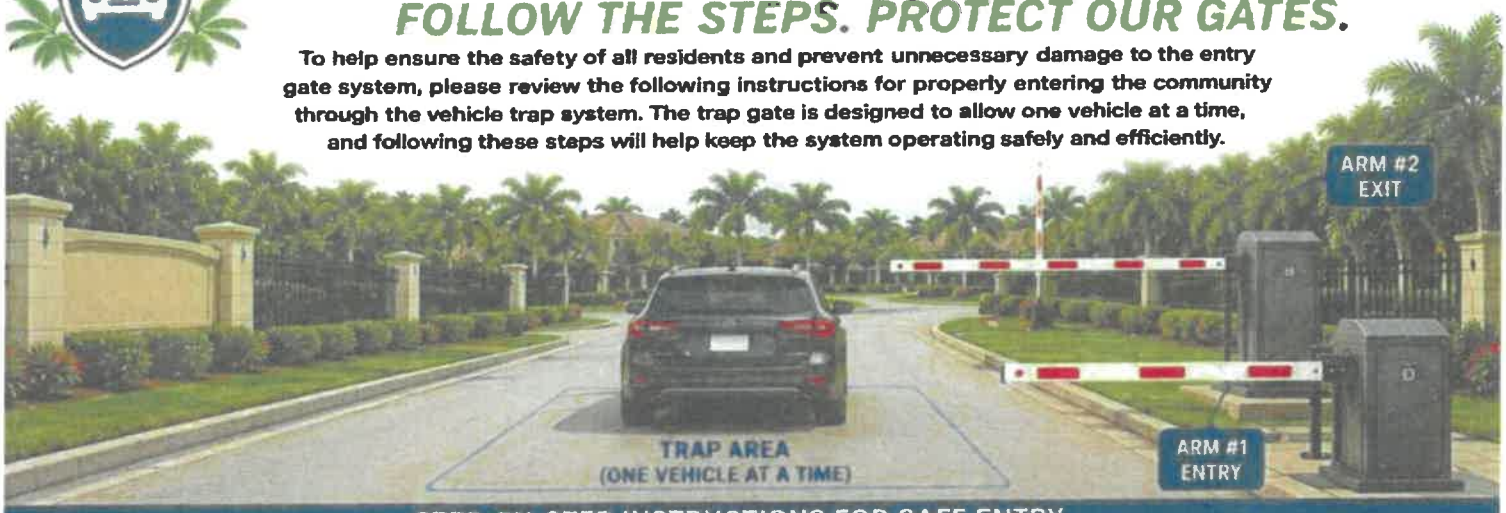
SAFE ENTRY. STRONGER COMMUNITY.

FOLLOW THE STEPS. PROTECT OUR GATES.

To help ensure the safety of all residents and prevent unnecessary damage to the entry gate system, please review the following instructions for properly entering the community through the vehicle trap system. The trap gate is designed to allow one vehicle at a time, and following these steps will help keep the system operating safely and efficiently.



STEP-BY-STEP INSTRUCTIONS FOR SAFE ENTRY

1 WAIT OUTSIDE THE TRAP AREA

- Do not pull forward if another vehicle is currently between the two gate arms.
- Stop completely behind the first entry arm and wait until the vehicle ahead has fully cleared the second gate before proceeding.

WAIT BEHIND FIRST ARM

2 ALLOW THE SYSTEM TO RESET

- Wait for the first gate arm to close completely after the previous vehicle exits.
- Do not tailgate. The system is programmed to allow only one vehicle at a time. Attempting to follow another vehicle through or drive under a closing gate arm will trigger an immediate system shutdown and may result in the gate arm striking your vehicle.

DO NOT TAILGATE

3 APPROACH THE SCANNER SLOWLY

- Drive slowly (under 5 mph) toward the first gate arm.
- Stop far enough away from the gate arm to allow the RFID antenna to detect your transponder before proceeding.

DRIVE SLOWLY (UNDER 5 MPH)

4 ENTER AND STOP INSIDE THE TRAP

- Proceed only after the first gate arm has opened fully to the vertical (90-degree) position.
- Stop your vehicle in the center of the trap area.
- Do not pull up too close to the second gate arm. Leave enough space for the first arm behind you to close completely, which will automatically trigger the

STOP IN THE CENTER OF THE TRAP AREA

5 EXIT PROMPTLY

Once the second gate arm is fully open, drive through immediately.

- Continue forward until your vehicle has completely cleared the exit sensors so the system can reset for the next resident.

DRIVE THROUGH AND CLEAR THE EXIT SENSORS

IMPORTANT REMINDERS

KEEP YOUR DISTANCE

Do not stop directly over the ground sensors or crowd either gate arm. Doing so can interfere with the system's sensors and wireless signals, causing the gate to malfunction.

ONE VEHICLE PER CYCLE

Every vehicle must complete its own entry cycle. Please do not attempt to "piggyback" behind another vehicle.

CAMERA ENFORCEMENT

The entry lanes are monitored by 24/7 video surveillance. Any hit-and-run incident or damage to the gate system will be investigated. A **$100 fee**, along with any applicable repair costs, will be automatically assessed to the responsible resident's account. As a reminder you are responsible for the actions of your guests.

Your cooperation is essential to maintaining a secure and reliable entry system for everyone in our community. *Thank you for helping protect our community!*
